A: The RAR format is perfectly safe if you don't exceed the maximum archive size. It is just that no one has ever checked if your program does not have the capability of hacking past that limit. If there is a RAR format that's faster or more efficient than the 7z format you are using, then you should use that instead. To answer the actual question: The RAR format used by 7-Zip is not safe if you exceed the limit. When you download a RAR file from a website, you are missing all the protection features of that format. The only protection a RAR file has is that it only opens when that file is in a special format; otherwise it might not work. Even so, the protection is there only for read and write access; the data in the archive is completely unprotected. You can use any modern web browser and download a file that size through the standard save dialog in any modern operating system. You won't need to use the arcane RAR archive format to do it. Archive formats have no security whatsoever in the common sense. Encryption does have some effect on the reliability of the format. The only safe RAR format is a RAR that's generated from a safe archive such as 7z. Note that the 7z format is not a unified format; it consists of several separate archive f678ea9f9e
